

Cancer Care for Adolescents and Young Adults

Free online learning modules now available!

Description:

Two web-based learning modules have been created as an introduction to the field of adolescent and young adult (AYA) cancer care. *Part I: Cancer Care for Adolescents and Young Adults* establishes a foundation of understanding around the developmental context of adolescence before exploring topics such as the common cancers affecting young people, how cancer differs in the AYA population and the importance of clinical trials. It builds the knowledge base required for *Part II: Cancer Care for Adolescents and Young Adults*, which explores the range of physical, emotional and psychosocial impacts of cancer and its treatment on young people, effective communication and engagement strategies, and key national AYA cancer care initiatives.

Audience:

Clinical and non-clinical professionals working with AYAs with cancer, or anyone with a professional interest in the field.

How it works:

Each module only takes about 5 minutes per day over approximately 8-9 weeks. Based on the principles of [spaced education](#), modules are comprised entirely of multiple choice questions and answers delivered to your email inbox at regular intervals. It's about delivering short bursts of information at a time and place that suits you- be it at your desk or on your mobile, in between appointments, or on your way to or from work.

You will be emailed 2 multiple choice questions every other day, which can be accessed on your desktop computer, tablet or mobile phone. You receive immediate feedback on your responses along with corresponding evidence-based information, key messages and freely available resources. Content is academically presented but practically focused.

Each question is presented at least twice over the course of your enrolment. Answer a question correctly twice in a row and the question is retired; retire all questions to complete the module. Delivery settings are based on published evidence of what best supports learning and knowledge retention; however, you may customise these settings if you wish (e.g. to prevent delivery of questions on weekends or while you are on leave, to increase or decrease the number and frequency of questions received, etc). Upon completion of the course you gain access to a website containing all of the information and resources contained within the module for future reference.

What's in it for me?

Enhance your understanding of issues relating to young people with cancer and develop greater confidence in working with this unique patient group through a fun approach to learning that only takes a few minutes a day.
